

## Privacy / Solar Control Screens

We are also able to supply and install a few different styles of powder coated aluminium privacy / solar control screens.

The aluminium slat screens can be made with different size slats and spacings to suit the style you require. They can be used for screening between concrete / blockwork column fencing, as an alternative to timber, to save on maintenance costs. There is also an option of a “timber-look” slat system.

**These Solar Control screens pictured below have Elliptical shaped blades, and can also be fitted with rollers for easy sliding of the screens to desired positions, if required. Sample sizes only shown.**
